SUMMARY

Computer Engineering graduate who built and deployed a production multi-device POS system used daily across 2 retail stores. Strong backend skills in PHP, MySQL, and JavaScript with hands-on experience in cloud database sync, REST API design, and distributed systems. OJT at an emergency response ICT company with outstanding performance rating.

TECHNICAL SKILLS

PHP

JavaScript

MySQL / SQL

Java

React.js

Spring Boot

TiDB Cloud

Firebase

REST API

Git / GitHub

C / C++

Arduino

HTML / CSS

XAMPP

Figma

ZeroTier VPN

ESC/POS Printing

PROJECTS

Oro Store POS System

PHP, MySQL, JavaScript, TiDB Cloud

Production point-of-sale system deployed across 2 retail stores with real daily transactions.

- Built multi-device sync architecture — cloud stock sync via TiDB Cloud, device-to-device HTTP API, offline queue with auto-flush
- Designed 20+ database tables with role-based access control (admin, manager, cashier, kiosk)
- Developed GCash payment integration, credit/delivery tracking, and kiosk self-service with priority queue
- Implemented thermal receipt printing via RawBT ESC/POS, client-side caching (localStorage + TTL), and server-side session caching
- Added rate limiting, environment-based credential management, and activity logging

BidBay — Live Auction Platform

React.js, JavaScript, CSS

Real-time auction web application with live bidding functionality.

- Built interactive bidding UI with React components and real-time state management
- Deployed to GitHub Pages for public access

Live Demo →

SariXpress

Java, Spring Boot, JavaScript

Sari-sari store management system with Java backend and web frontend.

- Built REST API backend with Spring Boot and Maven
- Developed product management and transaction features

GitHub →

SnackSwap — Reverse Vending Machine

Arduino, C++, IoT Sensors

Capstone thesis — IoT recycling machine that rewards snacks/water for recyclable bottles and cans.

- Programmed Arduino Mega to process data from 5 sensor types (ultrasonic, inductive, capacitive, IR, weight) for material validation
- Built real-time monitoring for inventory, water levels, and trash bin status
- Designed point-based reward system with LCD user interface

EXPERIENCE

OJT — Tech Support & System Maintenance

Feb – Apr 2025 (246 hrs)

EmergiNet — Emergency Response ICT Solutions

- Assisted in rollout of emergency response app across multiple cities in Bohol
- Contributed to Software Requirements Specification (SRS) documentation
- Performed system diagnostics, troubleshooting, and client tech support
- Rated **Outstanding (5/5)** across all categories by supervisor

EDUCATION

Cebu Institute of Technology – University

2021 – 2025

Bachelor of Science in Computer Engineering

CERTIFICATIONS

Introduction to Ethical Hacking

Planning & Designing Custom Software with AI
